

IT ISAC SPECIAL INTEREST GROUPS

A core feature of IT-ISAC membership is the ability to collaborate with subject matter experts from other companies on common security topics. Special Interest Group (SIG) members are able to collaborate through bi-weekly virtual meetings and work on impactful projects related to the group's concentration. We currently have three industry-specific SIGs (Elections, Food and Agriculture, and Critical SaaS) and three topic-specific SIGs (Security Intelligence, Insider Threat, and Physical Security).

ELECTIONS INDUSTRY SIG

The Elections Industry SIG supports voting technology providers by giving them an industry-only forum to share information about threats to their enterprises and systems and collaborate on election security challenges. This group meets bi-weekly. This SIG requires an application to be completed by interested companies and is designed for participation from senior-level employees at election technology companies, such as those that operate in government affairs or security.

CRITICAL SaaS SIG

The Critical SaaS (CSaaS) SIG serves as a forum for CSaaS companies to collaborate on a collective defense strategy to improve the security and operational resiliency of their services and share intelligence information with the industry at large. It enables companies who are essential to the internet to share cyber threat intelligence and effective security practices. It also provides a framework for these companies to collaborate on future security issues. The SIG holds a weekly analysts meeting and requires an application from interested companies. This group is designed for security managers, analysts, and IT executives from Critical SaaS companies.

INSIDER THREAT SIG

The Insider Threat Special Interest Group enables IT-ISAC members to collaborate on how to identify malicious and non-malicious threats within their organizations. The Insider Threat SIG provides a forum where members can share information about tools, processes, technologies, and policies used to identify and mitigate insider threats. This SIG currently operates via a listserv and virtual meetings are held when requested. This SIG requires an application from interested companies and is designed for those who are responsible for building and managing Insider Threat programs within their companies.

FOOD AND AGRICULTURE SIG

The Food and Ag Special Interest Group (SIG) helps members operating in the food and agriculture industry identify attacks, incidents, and threat indicators that they might have in common and share effective mitigation strategies. The SIG provides an ISAC-like capability to the industry and is currently the only information-sharing group that has an individual focus on food and agriculture security. This SIG meets bi-weekly and requires an application from interested companies. This group is designed for security managers, analysts, and IT executives from food and agriculture companies.

SECURITY INTELLIGENCE SIG

The Security Intelligence SIG brings together the senior level analysts from our member companies to exchange ideas, strategies, techniques, and information regarding advanced threat detection and enterprise risk management. This SIG meets bi-weekly and requires an application from interested companies. This group is designed for senior-level security analysts.

PHYSICAL SECURITY SIG

The Physical Security SIG provides a forum for subject-matter experts within our membership to discuss physical security and business continuity issues and share effective practices to mitigate or respond to threats. This group provides an efficient way to distribute information we receive on physical security threats and incident reports, from natural disasters, accidents, intentional attacks and other matters impacting physical security and business continuity. This SIG does not require an application, but participants must be IT-ISAC members.
